## 1.1 Revision History

Publicatieversie 1.0 (04-09-2017)

Publicatieversie 2.0 (31-12-2017)

Bevat: ZIB-472, ZIB-618.

Publicatieversie 2.1 (06-07-2019)

Bevat: ZIB-781, ZIB-788, ZIB- 792, ZIB-795, ZIB-796, ZIB-797.

Publicatieversie 2.1.1 (31-01-2020)

Bevat: ZIB-789.

Publicatieversie 2.1.2 (01-09-2020)

Bevat: ZIB-911.

Publicatieversie 2.1.3 (01-12-2021)

Bevat: ZIB-1452.

Publicatieversie 2.2 (10-06-2022)

Bevat: ZIB-1453, ZIB-1651, ZIB-1726.

Publicatieversie 2.2.1 (15-10-2023)

Bevat: ZIB-1743.

Publicatieversie 2.3 (24-04-2025)

Bevat: ZIB-2214, ZIB-2499.

## 1.2 Concept

The prescribed substance is usually medication. However, medical aids and bandages can also be prescribed and supplied via the pharmacy. Food and blood products do not strictly belong in the medication category, but can be prescribed and supplied by a pharmacy as well.

A type of medication can be indicated with **a single code**. That code can be chosen from several possible coding systems (concretely: GPK, PRK, HPK or article numbers). Correct use of these codes in the software systems will sufficiently record the composition of the product used, making a complete product specification unnecessary.

In addition to a primary code, **alternative codes** from other coding systems can also be entered (so that the GPK can be sent along in the event that the patient was registered based on PRK, for example).

Entering multiple ingredients will enable you to display a compound product. If one of the composite parts is liquid, the dosage will be given in milliliters; otherwise it will be given in 'units'.

In that case, the **composition of the medication** can be specified implicitly (with the use of a medication code) or explicitly, for example by listing the (active) ingredient(s) of the medication.

**Magistral prescriptions** can be entered as well. This can be done by means of the option listed above to enter coded ingredients and/or by entering the composition and preparation method as free text. This is a partial information model

## 1.3 Mindmap

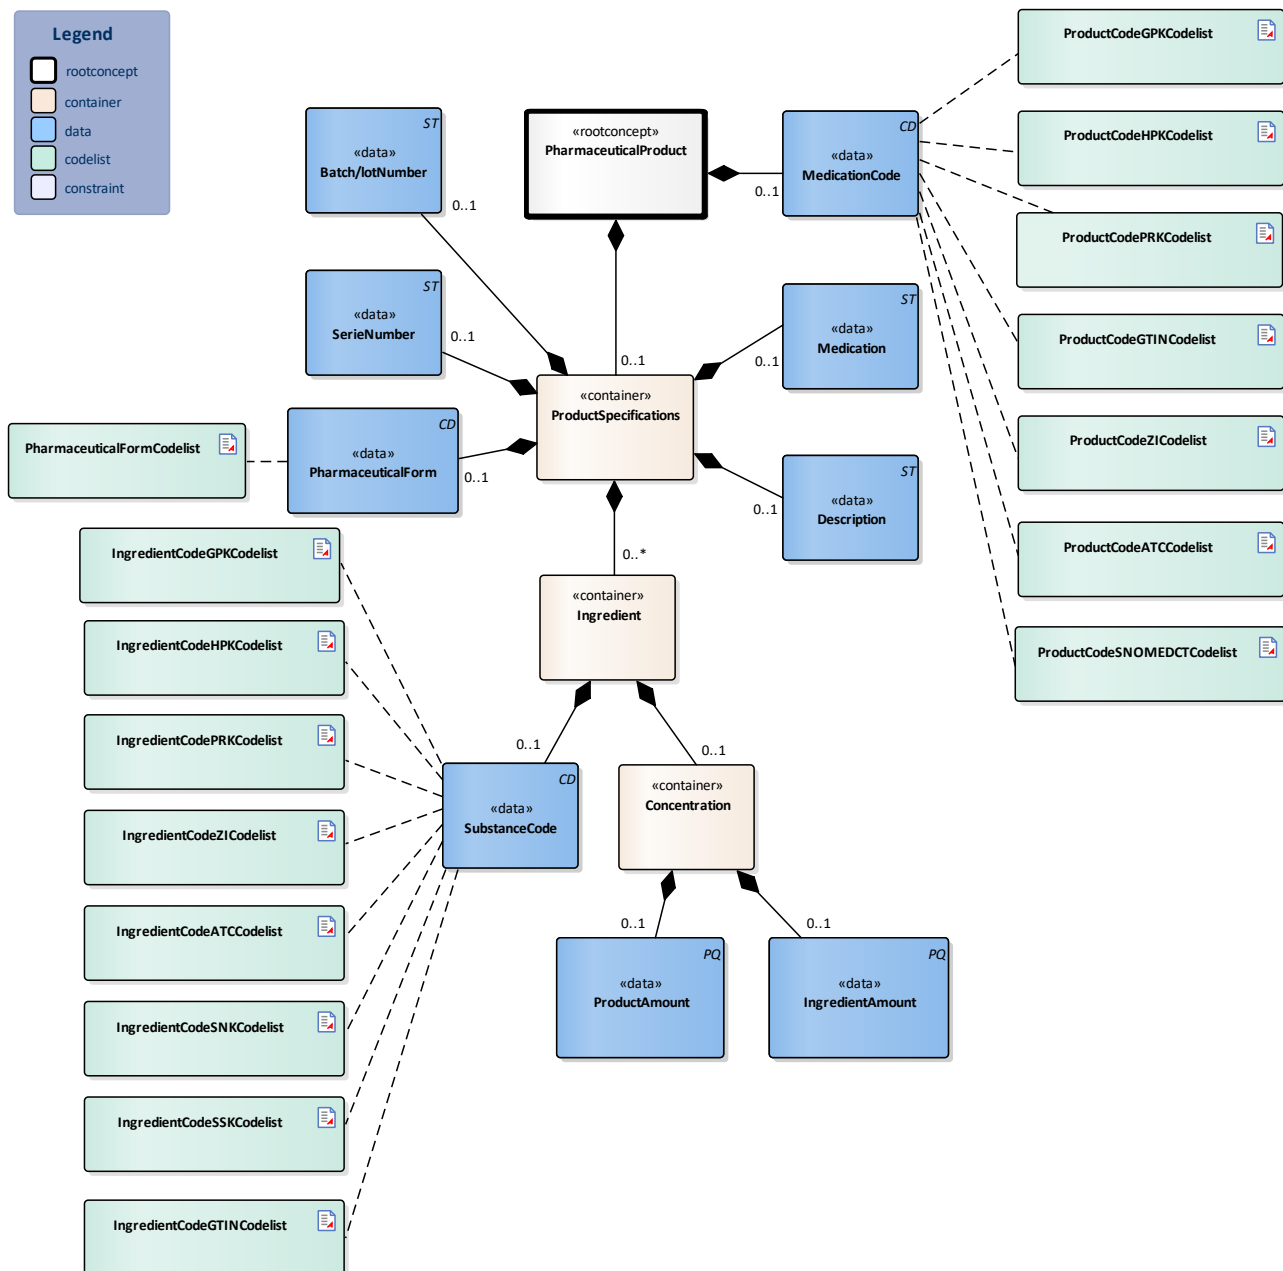

## 1.4 Purpose

The purpose of Product is to unambiguously describe the medication to be used.

## 1.5 Patient Population

## 1.6 Evidence Base

## 1.7 Information Model

<b>«rootconcept»</b>	<b>PharmaceuticalProduct</b>
<b>Definitie</b>	Root concept of the PharmaceuticalProduct partial information model. This root concept contains all data elements of the PharmaceuticalProduct partial information model.
<b>Datatype</b>	
<b>DCM::ConceptId</b>	NL-CM:9.7.19926
<b>Opties</b>	

<b>«data»</b>	<b>MedicationCode</b>
<b>Definitie</b>	<p>Coding medication in the Netherlands is done on the basis of the G standard (issued by Z index), which is filled under the direction of KNMP. The coded medication can be expressed as:</p> <ul style="list-style-type: none"> <li>• Global Trade Item Number (GTIN)</li> <li>• Z index number (ZI number)</li> <li>• Trade product code (HPK)</li> <li>• Prescription code (PRK)</li> <li>• Generic product code (GPK)</li> <li>• Anatomic Therapeutic Classification code (ATC)</li> <li>• SNOMED CT code</li> </ul>

	<p>The GTIN enables identification of the product including its origin with a barcode.</p> <p>The ZI number represents the trade product and the package size.</p> <p>The HPK is the code for the trade product (with the brand name) as used per dose/per time the medication is taken (1 pill, 1 puff, 1ml).</p> <p>The PRK contains als GPK information supplemented with information needed to prescribe the right product. This level is intended to facilitate generic prescription of drugs.</p> <p>The GPK defines the pharmaceutical characteristics of a product: ingredients, strengths, units, pharmaceutical form and route of administration.</p> <p>The Substance Name Code (SNK) is the (active) compound.</p> <p>Further information about the G Standaard levels see <a href="https://www.z-index.nl">https://www.z-index.nl</a>.</p> <p>So-called 90.000.000 numbers are used in local IT systems. These numbers shall not be used for external communication. In this case only the description (not the code) may be included. This is in accordance with national agreements (Nictiz Standard).</p> <p>SNOMED CT can be used as an alternative coding of a pharmaceutical product, it is used, for example, to more generically describe vaccinations from the National Vaccination Programme based on the combination of substances (e.g. DKTP vaccine). For vaccines registered in the past, a code from the G-standard is not always present, but it is recommended to record it for current processing. In addition, the SNOMED CT code can be registered as an alternative for the same product.</p>

<b>Opties</b>		

<b>«container»</b>	<b>ProductSpecifications</b>	
<b>Definitie</b>	<p>Container of the ProductSpecifications concept. This container contains all data elements of the ProductSpecifications concept.</p> <p>Product specifications are required if the product code is not sufficient to ascertain the active substances and strength.</p>	
<b>Datatype</b>		
<b>DCM::ConceptId</b>	NL-CM:9.7.19928	
<b>Opties</b>		

«data»	Batch/lotNumber	
Definitie	The batch/lot number provides a unique identification of the origin of information such as the production batch or machine number. The number is constructed according to the GS1 standard AI(10).( <a href="https://www.gs1.nl/sectorafspraken-over-standaarden/unieke-identificatie-en-productdata-gezondheidszorg/gs1-barcodes-2#application-identifiers-ais">https://www.gs1.nl/sectorafspraken-over-standaarden/unieke-identificatie-en-productdata-gezondheidszorg/gs1-barcodes-2#application-identifiers-ais</a> )	
Datatype	ST	
DCM::ConceptId	NL-CM:9.7.22279	
Opties		

«data»	SerieNumber	
Definitie	The serial number uniquely identifies the source of information of the dose itself. The number is constructed according to the GS1 standard AI(21). ( <a href="https://www.gs1.nl/sectorafspraken-over-standaarden/unieke-identificatie-en-productdata-gezondheidszorg/gs1-barcodes-2#application-identifiers-ais">https://www.gs1.nl/sectorafspraken-over-standaarden/unieke-identificatie-en-productdata-gezondheidszorg/gs1-barcodes-2#application-identifiers-ais</a> )	
Datatype	ST	
DCM::ConceptId	NL-CM:9.7.22280	
Opties		

«data»	PharmaceuticalForm	
Definitie	The pharmaceutical form indicates the form of the medication. Examples include: tablet, suppository, infusion liquid, ointment. If the product has a GPK code in the G standard, the form will be known in the G standard. For products without a code (free text, preparation by the pharmacy), the means of administration can be entered.	
Datatype	CD	
DCM::ConceptId	NL-CM:9.7.19931	
DCM::ExampleValue	230 (TABLET)	
DCM::ValueSet	PharmaceuticalFormCodelist	OID: 2.16.840.1.113883.2.4.3.11.60.40.2.9.7.8
Opties		

«data»	Medication	
Definitie	For medication which has no code, enter the complete name of the pharmaceutical product here.	
Datatype	ST	
DCM::ConceptId	NL-CM:9.7.19929	
DCM::ExampleValue	PARACETAMOL 500MG TABLET	
Opties		

«data»	Description	
Definitie	A textual description of the type of medication (including relevant properties of the composition and preparation method if possible), which is only used if no coded indication from the G Standard is available (historical data regarding magistral preparation which has been entered as free text instead of entering the substance codes).	
Datatype	ST	
DCM::ConceptId	NL-CM:9.7.19784	
Opties		

«container»	Ingredient	
Definitie	Container of the Ingredient concept. This container contains all data	

	<p>elements of the Ingredient concept.</p> <p>A product contains one or more active substances and excipients. These are usually determined by the product code. For medication prepared or compounded by the local pharmacy, each ingredient must be entered separately.</p> <p>The active substances play an important role, as they:</p> <p>a) determine the pharmacotherapeutic effect of the medication and</p> <p>b) serve as the basis for the indication of the strength of the medication (e.g. 200 mg).</p>
<b>Datatype</b>	
<b>DCM::ConceptId</b>	NL-CM:9.7.19932
<b>DCM::ExampleValue</b>	captopril
<b>Opties</b>	

<b>«data»</b>	<b>SubstanceCode</b>	
<b>Definitie</b>	<p>Active substance or excipient.</p> <p>Here, the same codes can be used as for the ProductCode (for dilutions and compounds in particular), but now, the SSK and SNK codes can also be used to indicate a substance (to list ingredients of local products prepared by the pharmacy).</p> <ul style="list-style-type: none"> <li>• GTIN International Article Number</li> <li>• Z-index number (ZI-number)</li> <li>• Trade product code (HPK)</li> <li>• Prescription code (PRK)</li> <li>• Generic product code (GPK)</li> <li>• Anatomic therapeutic classification (ATC)</li> <li>• Substance name code (SNK)</li> <li>• Substance name code with route of administration (SKK)</li> </ul>

<b>Opties</b>		

<b>«container»</b>	<b>Concentration</b>
<b>Definitie</b>	<p>The relative amount of this ingredient in this product.</p> <p>Calculation of Concentration = Ingredient Amount ÷ Product Amount.</p> <p>This could be a concentration if the medication is dissolved in liquid, for example.</p>

<b>Datatype</b>		
<b>DCM::ConceptId</b>	NL-CM:9.7.19933	
<b>DCM::ExampleValue</b>	25mg/stuk of 50IE/ml of 200mg/500ml	
<b>Opties</b>		

<b>«data»</b>	<b>IngredientAmount</b>	
<b>Definitie</b>	The amount and unit of this ingredient. This is the numerator for the calculation of the concentration. The unit should be selected from the G Standard (Table 902).	
<b>Datatype</b>	PQ	
<b>DCM::ConceptId</b>	NL-CM:9.7.22277	
<b>DCM::ExampleValue</b>	5 ml 20 mg	
<b>Opties</b>		

<b>«data»</b>	<b>ProductAmount</b>	
<b>Definitie</b>	Amount of the product. This is the denominator for the calculation of the concentration. Optionally a translation to NHG table Gebruiksvoorschriften (Table 25) is also allowed.	
<b>Datatype</b>	PQ	
<b>DCM::ConceptId</b>	NL-CM:9.7.22278

## 1.8 Example Instances

Afgesproken geneesmiddel
Farmaceutischproduct
Lisinopril tablet 10mg
Methotrexaat inj/vlst 25mg/ml 0,6 ml

## 1.9 Instructions

Alternative codes for the same product can be added to the coded ProductCode field in the zib FarmaceutischProduct during implementation. Example: the code "871878002 | vaccine with only antigens of Corynebacterium diphtheriae, Bordetella pertussis, Clostridium tetani and human poliovirus (pharmaceutical product)" from SNOMED CT can be an alternative code for GPK code "130745 | DKTP VACCINE (TRIAXIS POLiO)" from the G-Standard. The concepts may not differ from each other, but one code may be more generic than the other. So combining "137006 | CHOLERA VACCINE ORAL" (GPK) with "991000221105 | vaccine with only antigen from Vibrio cholerae (pharmaceutical product)" (SNOMED CT) is allowed, but a "176397 | DTK vaccine" (GPK) cannot be an alternative to "130745 | DKTP VACCINE (TRIAXIS POLiO)", because these are different vaccines (with and without Polio vaccine).

## 1.10 Interpretation

### 1.11 Care Process

### 1.12 Example of the Instrument

### 1.13 Constraints

### 1.14 Issues

### 1.15 References

### 1.17 Traceability to other Standards

### 1.18 Disclaimer

The Health and Care Information Models (a.k.a Clinical Building Block) has been made in collaboration with several different parties in healthcare. These parties asked Nictiz to manage good maintenance and development of the information models. Hereafter, these parties and Nictiz are referred to as the collaborating parties. The collaborating parties paid utmost attention to the reliability and topicality of the data in these Health and Care Information Models. Omissions and inaccuracies may however occur. The collaborating parties are not liable for any damages resulting from omissions or inaccuracies in the information provided, nor are they liable for damages resulting from problems caused by or inherent to

distributing information on the internet, such as malfunctions, interruptions, errors or delays in information or services provide by the parties to you or by you to the parties via a website or via e-mail, or any other digital means. The collaborating parties will also not accept liability for any damages resulting from the use of data, advice or ideas provided by or on behalf of the parties by means of the Health and Care Information Models. The parties will not accept any liability for the content of information in this Health and Care Information Model to which or from which a hyperlink is referred. In the event of contradictions in mentioned Health and Care Information Model documents and files, the most recent and highest version of the listed order in the revisions will indicate the priority of the documents in question. If information included in the digital version of a Health and Care Information Model is also distributed in writing, the written version will be leading in case of textual differences. This will apply if both have the same version number and date. A definitive version has priority over a draft version. A revised version has priority over previous versions.

## **1.19 Terms of Use**

The user may use the Health and Care Information Models without limitations. The copyright provisions in the paragraph concerned apply to copying, distributing and passing on the Health and Care Information Models.

## **1.20 Copyrights**

A Health and Care Information Model qualifies as a work within the meaning of Section 10 of the Copyright Act (Auteurswet). Copyrights protect the Health and Care Information Models and these rights are owned by the cooperating parties.

The user may copy, distribute and pass on the information in this Health and Care Information Model under the conditions that apply for Creative Commons license Attribution-NonCommercial-ShareAlike 3.0 Netherlands (CC BY-NC-SA-3.0).

The content is available under Creative Commons Attribution-NonCommercial-ShareAlike 3.0 (see also <http://creativecommons.org/licenses/by-nc-sa/3.0/nl/>)

This does not apply to information from third parties that sometimes is used and / or referred to in a Health and Care Information Model, for example to an international medical terminology system. Any (copyright) rights that protect this information are not owned by the cooperating parties but by those third parties.

Nictiz is the independent national competence centre for electronic exchange of health and care information. The activities of Nictiz include the targeted development and management of information standards at the request of and in partnership with the stakeholders in healthcare. Nictiz advises these parties on all aspects of information exchange and identifies (future) national and international developments.
